Research Experience

Institute of Modern Optics, School of Physics, Peking University

UNDERGRADUATE STUDENT, DIRECTED BY PROF. XIAOYONG HU

Beijing, P.R.China

2019 Jul - Now

Individual research:

- Realized the conversion of circularly polarized light with two on-chip silicon waveguides based on EP-encirclement in a four dimensional system. (The publication is in preparation.)
- Constructed an exceptional point in a photonic crystal waveguide with gain and loss.

Team collaboration:

- Participated in writing a review on all-optical switch: I finished the part of PT symmetry and exceptional points independently.
- Participated in the inverse design of basic devices in all-optical binary computation.

Centre for Advanced Photonics and Electronics, University of Cambridge

STUDENT VISITOR, DIRECTED BY PROF. DAPING CHU

Cambridge, United Kingdom

2021 Jul - Now

- Designed a new type of photonic crystal waveguide with liquid crystal on silicon, and realized optical switch and wavelength division multiplexing based on the structure.
- Fabricated the Bragg Gratings experimentally and measured its transmission spectrum.
